IV THERAPY

(Vitamin Drip)

We offer a range of vitamin-rich formulations targeting different health and wellness solutions, from hydrating, detoxifying, enhancing antioxidant levels, or increasing energy, our team can help provide you with the vital mix of nutrients your body requires.

What is IV Therapy?

IV therapy is the practice through trained professionals to deliver fluids, vitamins and minerals directly into your bloodstream. When compared to a 20-30% absorption rate through standard oral methods, you get the full benefit of bio-available vitamins delivered directly. We offer premium custom drips & injections as with booster shots delivered by a trained staff that will guide you through to achieve the best drip experience.

Who should get IV Therapy?

IV Therapy is good for everyone. Different combinations in our therapies can help performance recovery, maximize health, improve immunity and more. IV Therapy is the only process that allows for 100% absorption.

How soon will I feel the effects of Intravenous Therapy?

Because IV therapy is the fastest way to administer fluids and essential vitamins, minerals amino acids, using this method you begin to feel the effects immediately.

- ✓ Boost in skin glow and anti-aging
- ✓ Reduction in dehydration and hangover recovery

Myer's Cocktail

The Myers' Cocktail is used to remedy all sorts of symptoms, from low energy to headaches and dehydration. This cocktail delivers hydration, vitamins and minerals directly into your bloodstream to maximize your overall health and wellness. Since N vitamin therapy bypasses your digestive system, it is also ideal for patients with mal-absorption issues as a result of weight loss surgery, celiac disease, Crohn's disease or pernicious anemia.

Performance and Recovery Infusion

After an intense workout, your body can be left feeling drained and sore. Whether you have run a marathon or hit the gym for a lifting session, you can be left feeling in need of a boost. IV therapy can be used to help athletes recover following periods of exertion. Recovery N drip therapy includes a number of different components designed to support athletes during the recovery period. Fluids help rehydrate you, while vitamins, antioxidants and amino acids help improve your energy levels and repair any tissue damage.

Immunity

The immune system fights off infection and keeps the body healthy, but we can still get sick. Whether you are worried about getting sick - especially during cold and flu season or you've caught a bug, N therapy can help support your immune system. IV therapy for immune system support includes a number of vitamins and minerals such as vitamin C and Zinc to naturally boost the immune system and reduce the chances of you catching a bug. Since Vitamin C also helps your body heal faster, this is also ideal for post-surgical patients.

PRICING

1 treatment..... \$150

3 treatment..... \$370 (Save \$80)
